Proven Mobility Management with SOTI MobiControl

SOTI MobiControl is the Enterprise Mobility Management (EMM) solution that gives you visibility and control over where your business-critical mobile devices are, what they're doing, how they're performing and what security or compliance risks they're facing.

Deploy apps to smartphones. Enroll and provision new tablets in the field. Track the location of rugged devices. Identify and neutralize security risks to the IoT endpoints. Protect critical data stored on mobile devices. Minimize device downtime so field workers stay productive.

It's the EMM solution designed for any device, any form factor, any operating system (OS) and any mobile requirements of your business.

Now Featuring SOTI XTreme Technology and SOTI XTreme Hub*

SOTI MobiControl now features SOTI XTreme Technology. This new feature optimizes data communication performance for organizations with limited bandwidth connections to their remote warehouses, distribution centres and retail stores. SOTI XTreme Technology reduces the time required to distribute apps and data to your remote mobile devices. Improve business efficiency and customer satisfaction with 10X faster data delivery.

SOTI XTreme Hub communicates directly with SOTI MobiControl from distributed locations to receive data and app transfers, in place of each individual Android device. Individual devices are instructed by SOTI MobiControl to acquire new updates directly from the SOTI XTreme Hub. This greatly reduces the number of times new data and apps are required to be sent across an organization's limited connection, and reduces the time required to complete data and app deployments across large numbers of Android devices by up to 60%.

SOTI MobiControl is one part of a powerful suite of solutions. [Click here to learn how your business can experience the SOTI ONE Platform.](#)

*SOTI XTreme Hub is only available to customers who subscribe to SOTI Premium Plus or Enterprise Plus Service

What Can SOTI MobiControl Do For You?

Deploy devices quickly and easily

Securely manage apps and content

Eliminate mobile device downtime

Optimize data delivery 10X or more

Features and Capabilities

Full Lifecycle Device Management
